A NEW RECORD FOR THE LUMPFISH IN CHESAPEAKE BAY.

This seems to be the second specimen to be recorded from Chesapeake Bay. It was caught in a trap off Wolf Trap Light, April 29, 1914, by E. L. Wilson, and later taken to the Bureau of Fisheries for identification. The specimen was a large one about $14\frac{3}{4}$ inches long, and full of ripe or nearly ripe eggs. B. F. tag 9548.

In *Forest and Stream*, August 3, 1907, page 178, Barton A. Bean records the capture of an adult female Lumpfish (*Cyclopterus lumpus*), at Buckroe Beach, Chesapeake Bay, about two miles north of Old Point Comfort. It was included in a shipment of fish to Messrs. Sheaffer & Stuart, of Washington, D. C., by Thomas V. Weber, April 14. After describing the specimen Bean says:

"The specimen here recorded is a female, apparently having spawned; seventy eggs passed freely from the fish while being measured."

WILLIAM C. KENDALL,
U. S. Bureau of Fisheries.

NOTES ON NEW JERSEY FISHES.

During the past season a number of New Jersey fishes have fallen under my notice. Though most of the species are common, several interesting associations and records are here given:
